# SLASH PHASE 6

ABOUT SLASH

1

- **Search different sites** for the best deals.
- **Track prices** of different products to get the best deal you deserve.
- **Enhanced user interface** that lets you quickly navigate the product catalogs.
- Skip looking for offers on individual websites when we get you the best deals from the **popular e-commerce platforms** out there.
- **Alert mechanism** to alert you about the price drop of your favorite item.

CURRENT VERSION IMPLEMENTATION

2

- **Added wishlists** to track your favorite products.
- **Revamped the UI in React** to improve user experience and help with user retention.
- Refactored the application into **microservices** to scale the UI and backend independently.
- **Opened** the platform to **Sellers** to directly post their products on the platform.
- Added a cron job for **alerting** users about price drop of their favorite products.

PROPOSED ENHANCEMENTS

3

- Maintain **user session** by making login persistent by storing user session cookies.
- Add s**earch functionality** for seller posted items
- Add **features like shopping cart** and payment for the buyers to purchase the seller posted items.
- Add **role based login** for the buyers and sellers.
- Integrate a **chatbot** for the buyers and sellers to discuss and negotiate on the product pricing.
